Do You Have Any of These Problems with Powdered Wax?

- Waxing takes too long.....
- Powdered wax is everywhere except on the ironer.....
- Using a wax sheet is too difficult so the operators never wax the ironer.....
- Wax build-up.....

Easy Wax Can End These Frustrations!

- Easy Wax sprays directly onto a cold ironer. You do not have to wait for the ironer to heat-up.
- No mess. Easy Wax is applied directly to the ironer.
- No wax sheet is necessary.
- Easy Wax also reduces static build-up.

Easy Wax Instructions

- Apply to your flatwork ironer at ambient temperature only. Once your ironer is waxed, then turn on heat to the ironer. If your ironer is hot, turn off heat and allow to cool before applying Easy Wax.
- When applying, hold can upright, approximately 18" (45cm) away from surface to be waxed. DO NOT SPRAY INTO A FLAME OR OTHER HOT SURFACE.
- For heated cylinder ironers, spray directly on the revolving cylinder, making two passes. For padded roll (chest type) ironers, spray the revolving padded roll, making two passes.
- Wax your ironer every 6 hours. DO NOT OVER WAX.
